

Amazing kids see through metal

Using a mysterious '7th sense' they beam rays 10 million times stronger than radar

By EDWIN RICH

A group of amazing Chinese children have astounded scientists by doing what even Superman can't — they see through lead.

After years of exhaustive tests, top scientists in China say the superkids have the incredible power to beam invisible rays through paper, glass, cloth, plastic — and even lead.

Scientists call the power a "seventh sense" — one step beyond the "sixth sense" of ESP.

These new rays are "a staggering 10 million times stronger than the most powerful radar equipment in present use," Luo Dongxu, a scientist with the Chinese Air Force, told The NEWS in an exclusive interview.

Luo believes the children have a sort of microwave transmitter in their brains which allows them to send out the rays and actually "see" through things.

The Chinese say that more than 50 children and one adult have shown this power in tests by reading messages folded and concealed in containers of various materials.

They include:

• The amazing 15-year-old Yu Ruihua, from rural Cangxian County, who can beam rays through materials that even deadly radiation can't penetrate.

In one startling demonstration, Ruihua "saw" through a lead container used to store radioactive material and read a message on a piece of paper inside.

• Xiong Jie, a 12-year-old girl from Wuhan, who copied com-

plex Chinese characters that had been drawn on a piece of olded paper.

• Nine-year-old Jiang Yan, of Peking, who claims to "see" with 10 different parts of her body — including her pigtail. In one test, she correctly described a drawing on a piece of paper which had been folded and inserted into a glove which was then wrapped around her wrist.

• Wang Bin, an 11-year-old Peking girl, whose power penetrated a plastic container. She also took two folded pieces of paper with the English words "typewriter" and "perception" written on them, rolled them into a ball and placed them in her right armpit.

Bin then wrote out the word "perception" and "tipet." Incredibly, she does not read English.

• Zheng Hong, an 11-year-old from Changzhou, who could read words on a paper slipped under her foot.

The discovery of this new power could shatter the basis of modern science, says Professor Dong Taihue, of the Department of Optical Engineering at Zhejiang University.

"We are facing a challenge to orthodox scientific theories," he said.

"Further research of this power could result in tremendous breakthroughs in physiology, physics and biological

physics — a whole new area of science could just be to be discovered."

After studying the the Physics Department King Teacher's College, he concluded that the children on a TV-like screen in his mind. Some have even having two color TV sets on either side of their heads.

When the first of the children — 12-year-old — surfaced in 1978, he was convinced they were working with a form of advanced ESP, the "sixth sense" that all possess to a lesser degree.

But with further tests, scientists realized they were working with a greater power — "seventh sense."

Yu first became aware of his power while walking from school with his friend Xiaiming. Yu recalls:

"We were tussling when my ear brushed his coat pocket and immediately, two Chinese cigarettes sprang into my mind."

"I told Chen what I realized and he took out two Chinese cigarettes and told me the brand name."

Yu was afraid to tell his father of his discovery, so he began playing games with others in his mountain village in Daxi. He had them write on a piece of paper, then crumpled and put it in his ear.

"I guessed right every time," says Yu.

Air Force research learned of Yu and began working with him and later with the other children.

"Each time I was convinced of the existence of something beyond our present knowledge," said Yu.

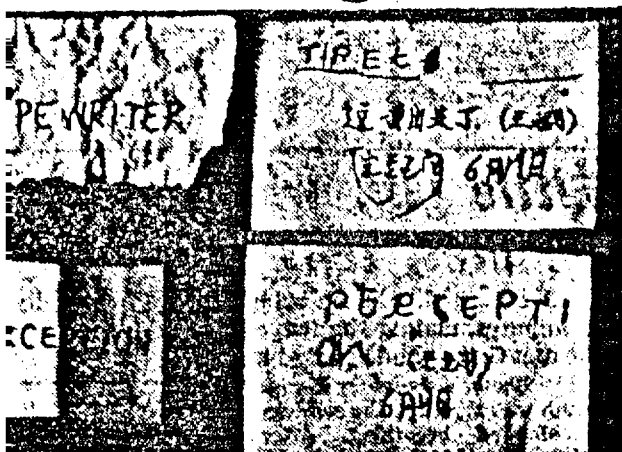

The Chinese believe who have the power to see.

The only adult to possess this power, a 25-year-old woman named Mou Feng, could "read" five messages on pieces of paper placed in different parts of her body.

Fengquinn says she learned her power at the age of 12. Her parents forced her to be quiet about it fearing some sort of witchcraft.

Experts say the discovery of the children may explain the famous people's history who were known to possess strange powers.

These include a doctor who lived 2,300 years ago and could "see" diseases in internal organs. Another disciple of Lao tzu, Taoism, who could "hear" without using ears.

Below, was able to see through a plastic container. In a separate experiment she read messages that had been written under her arm. Top photo shows those messages at left writing of them at right. Amazingly the 11-year-old doesn't speak English.
